

Homework

Variable Assignments & BEDMAS

1. Highlight the assignment statements that will cause errors. Explain what the problem is for each statement that causes an error.

```
int a = 6;  
int b = 3;  
float c = 3.5f;  
char e = 'd';  
int f;
```

// consider each of the following lines individually; assume the initial values given above

```
a = 4;
```

```
a = 4.5; a is a integer, floating point values are not allowed
```

```
b = a + b;
```

```
c = a + b;
```

```
e = e;
```

```
e = "h"; e is a char value, double quotation mark signify a string
```

```
e = "def"; e is a char value, cannot hold strings
```

```
b = 3 / 5;
```

```
b = f; f is not set to anything
```

2. Use BEDMAS to calculate the result of the following equations. After you are done, try putting each statement in a test program to confirm your answers.

Questions

Answer

a) $240 / 8$

30

b) $19 / 3$

6

c) $188 \% 9$

8

d) $9 \% 9$

0

e) $5 + 8.0 / 3.0$

7.67

f) $3 + (4 * (2 + 2)) \% 6$

7

g) $4 - 5 * 2 \% 4 / 1$

2

h) $4 / -9$

0

i) $3 \% 4$

3

3. **Average.java** Write a program that reads three double values and computes their average. (Don't worry about rounding at this point).
4. **Drop.java** The height of an object at any given time dropped from a starting height of 100 meters is given by the equation $h = 100 - 4.9t^2$ where t is the time in seconds. Write a program that prompts the user for a time less than 4.5 seconds and then displays the height of the object at that time.
5. **PizzaCost.java** The cost of making a pizza at a local shop is as follows:

- Labour cost is \$0.75 per pizza, regardless of size
 - Rent cost is \$1.00 per pizza, regardless of size
 - Materials is $\$0.05 \times \text{diameter} \times \text{diameter}$ (diameter is measured in inches)
- Write a program that prompts that user for the size of a pizza and then display the cost of making the pizza.

6. **Alive.java** Write a program that calculates the number of hours of your life that you have spent sleeping. Assume that you sleep 8 hours each night. To simplify the problem, assume that there are 30 days in each month and 365 days in each year. The program output should look similar to:

```
Enter your birthdate:
Year: 1990
Month: 9
Day: 8
Enter today's date:
Year: 2006
Month: 2
Day: 12
You have been alive for 5634 days.
You have slept 45072 hours.
```

7. **Fastfood.java** A fast food restaurant charges \$1.69 for burgers, \$1.09 for fries, and \$0.99 for sodas.
- Write a program that prompts the employee for the number burgers, fries, and sodas and then displays the totals, the HST (13%), and the final cost.
 - Modify the program to prompt the employee for the amount tendered and then display the change due.
8. **DigitSum.java** Write a program that asks the user for a three-digit number, finds the sum of the digits of the number, and then prints both the number and its digit sum.
